LIFE SCIENCE

Efficiency of extraction of insecticides from soil samples

THE APPLICATION SCOPE / PURPOSE

An insecticide is a pesticide used to kill or inhibit insects and their development stages in agriculture, material protection and hygienic areas. A legal maximum amount of insecticide is specified and may not be exceeded. To test the contamination of insecticides in the soil, soil samples are taken regularly and the insecticide is extracted. Efficient extraction means that the sample is dispersed in the solvent with the largest possible surface area. Kinematica offers solutions to increase efficiency in soil sample for quality control.
