**HOMOGENIZATION
VACCINE PRODUCTION
REACTRON®**

PHARMACEUTICAL

Vaccine production from animal tissue

THE APPLICATION SCOPE / PURPOSE

Vaccines are drugs that train the immune system when the body is attacked by pathogens such as viruses or bacteria. Antigens, expressed from the pathogens, are responsible to trigger an immune response in our body. Sterile and aseptic conditions with temperature control during vaccine production are important requirements. An efficient and fast extraction is desired to reduce costs and material. This is where Kinematica offers a solution called **REACTRON®** RT 30.
